

Polymer-coated seed offers the benefits of safe handling to your workers, for farmers and dealers. They are key to making sure seed treatments are firmly held only where they are needed... on the seed.

Germain's Offers a wide range of Spectrum™ brand polymers for your coating system.

100, 200, 300, 500 & 700 Series line of polymers: Developed to apply a wide range of crop protection seed treatments and biological treatments such as rhizobia. Good adhesion properties, supplied in concentrated form. Compatible with all known pesticides and fertilizers. Low tack for better seed singulation. Developed for batch rotary seed treaters, but will perform equally well in conventional and continuous treaters, in low as well as high volume coating situations.

Polycote® line of polymers: Especially developed for the ultra precise application of sophisticated seed treatments to high value seed species. Originally designed for use in batch side vented pan coaters, Spectrum™ Polycote® offers the ultimate seed-to-seed distribution of treatment and cosmetic coverage. Available as matte, glossy and pearlescent, all colors and shades are available as custom designed.
